Hello,

I am a Computer Information Systems graduate with hands-on experience in networking, system administration, and hardware support, seeking an entry-level IT or systems role.

- Experience with networking fundamentals and system troubleshooting
- Familiarity with tools such as XAMPP, phpMyAdmin, and Linux environments
- Hands-on work with databases (MySQL/PostgreSQL) and basic web technologies

Strong problem-solving skills developed through debugging and system setup

Throughout my college career, I've gained valuable experience in IT and computer systems, from networking and system administration to programming and hardware support. I am eager to apply these skills in a real-world setting, continue developing my abilities, and grow within the industry.

Thank you for taking the time to review my resume and application. I look forward to talking with you.

Sincerely,

Christopher 'CJ' Chamberlin
